William Lo Channiko

APPLIED AI ENGINEER

Jakarta, Indonesia | +62 813 4852 0623 | williamlochanniko4@gmail.com
linkedin.com/in/william-lo-channiko | github.com/williamlo90 | william-lo-channiko-portfolio.pages.dev

Applied AI engineer with 1 year of full-time software engineering experience. Builds source-grounded document and case-resolution workflows with human approval. Delivers full-stack systems, evaluations, and validated AWS/Azure deployments.

TECHNICAL SKILLS

Applied AI: OpenAI API, LangGraph, RAG, embeddings, structured outputs, Mistral OCR, offline evaluation

Software & integrations: Python, TypeScript, SQL, FastAPI, React, Next.js; REST APIs, PostgreSQL/pgvector, ERPNext, Docker

Security & reliability: RBAC, audit trails, idempotency, worker recovery; Pytest, Vitest, Playwright, CloudWatch monitoring

Cloud & infrastructure: AWS (ECS/Fargate, RDS, SQS, S3, Lambda); Azure (Container Apps, Blob Storage, Service Bus, PostgreSQL); Docker, CI/CD

AI PROJECTS

Case Resolution Copilot | GitHub Repository *Jul-Sep 2026*

- Built a policy-governed AI case-resolution system that converts fragmented evidence and versioned policies into review-ready Decision Briefs, with deterministic risk controls and human approval for consequential actions.
- Reduced raw median workflow time by 83.7% (582s to 95s) in a developer-operated benchmark across three matched synthetic cases; validated critical behavior through 20/20 regression observations, a 3/3 OpenAI canary, and 4/4 PostgreSQL workflow scenarios.
- Engineered the platform with FastAPI, PostgreSQL/pgvector, LangGraph, Celery, and Next.js; strengthened workflow reliability through idempotent actions, audit trails, and worker recovery. Live-validated a reproducible AWS deployment with CloudWatch monitoring across ECS/Fargate, RDS, SQS, S3, Lambda, CloudFront, IAM, and Secrets Manager.

Invoice Review | GitHub Repository *Jul-Aug 2026*

- Built an AI invoice-to-ERP workflow that turns unstructured documents into validated, review-ready invoice data, combining OCR extraction, deterministic validation, and human approval before ERPNext export.
- Reduced median invoice-to-ERP draft time by 68% (153s to 49s) across six paired synthetic invoices; achieved the expected outcome in 10/10 test cases, compared with 9/10 through manual ERPNext entry.
- Integrated React, FastAPI, Mistral OCR, OpenAI, and ERPNext; validated an end-to-end Azure deployment using Container Apps, private Blob Storage, Service Bus, and PostgreSQL, processing a synthetic invoice from upload through the review queue.

PROFESSIONAL EXPERIENCE

PT Dover Chemical

Full-Stack Software Engineer Intern | Jakarta, Indonesia *Jan 2025-Jan 2026*

- Owned end-to-end development of an offline-first Draft Sales Order application, from requirements gathering with IT supervisors and sales users through implementation, integration, and testing; built local persistence, background synchronization, caching, retries, and attachment handling across 38 API operations and 15 Room entities/DAOs.
- Independently designed and built a Customer Management System end to end around a 6,656-record customer master dataset, translating sales and administrative requirements into validated imports, reporting, audit trails, and role-based approval, rejection, and reopen workflows across 15 data domains.

EDUCATION

Multimedia Nusantara University, Tangerang, Indonesia 2022-2026

Bachelor's Degree in Informatics (S.Kom.) | Graduated with Distinction | GPA: 3.82/4.00

Thesis: Fine-tuned two IndoBERT classifiers on 1,822 Indonesian opinions; test macro-F1 of 0.981 (sentiment) and 0.870 (aspect), with inter-annotator Cohen's kappa of 0.954 and 0.900 on 200 opinions.

Honors: Academic Achievement Scholarship, 2024
